DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Attorney of record Frank Bogacz on 09-19-2005.

3. The application has been amended as follows:

In claim 11, line 8, delete "deactivating circuitry associated with an AGC loop in the transmitter during an interval when the transmitter is active and no gain adjustment is desired for a corresponding variable gain amplifier", the follows have been inserted: -- said transmitter includes a first variable gain amplifier and a duplicate of said first variable gain amplifier, wherein said method further comprises deactivating said duplicate of said first variable gain amplifier during an interval when the transmitter is active and no gain adjustment is desired for the first variable gain amplifier --.

In claim 15, line 1, delete "canceled", the follows have been inserted: -- The method of claim 11, comprising: deactivating circuitry associated with an AGC loop in

the transmitter during an interval when the transmitter is active and no gain adjustment is desired for a corresponding variable gain amplifier --.

(End of Amendment)

REASONS FOR ALLOWANCE

4. Claims 1-4, 6-15, and 17-22 are allowed over the prior art of record.

5. The following is an examiner's statement of reasons for allowance:

The applicant's Remarks, filed on 07/20/2005, have been carefully reviewed with update search. Consequently, reasons for allowance of claims 1-4, 6-15, and 17-22 are set forth in according to the applicant's remarks stated on pages 8-9.

Regarding claims 1 and 18, the prior art made of record fails to clearly teach or fairly suggest, the feature of a transmitter comprises a first and second variable gain amplifier having a first and second AGC loop to control a gain thereof, the second variable gain amplifier being located within a common transmitter chain as the first variable gain amplifier and at least one of the first AGC loop and the second AGC loop is coupled to a duplicate circuit that mimics the operation of a corresponding variable gain amplifier in the transmitter chain, in combination with other limitations, as specified in the independent claims 1 and 18, and further limitations of their respective dependent claims 2-4, 6-10, and 19-22.

Regarding claim 11, the prior art made of record fails to clearly teach or fairly suggest, the logical consequent steps of a method of a transmitter includes a first variable gain amplifier and a duplicate of the first variable gain amplifier, wherein the method further comprises deactivating the duplicate of the first variable gain amplifier during an interval when the transmitter is active and no gain adjustment is desired for the first variable gain amplifier, in combination with other limitations, as specified in the independent claim 11, and further limitations of their respective dependent claims 12-15 and 17.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
